

Environment Sound Classification
Submitted by: Gupta, Amit

Due to the large size of the dataset, I am not able to include it in the zip file.

Instead I am providing a link to download the dataset:

It is called ESC-50 (Environment Sound Classification for 50 sounds):

<https://www.kaggle.com/mmoreaux/environmental-sound-classification-50>

When you go this website, on the top right you will see a Download button.

Once you download and unzip the dataset, place the entire directory “environment-sound-classification-50” under the ./data folder on your system. You can then run the provided Jupiter notebook.
